## EDUCATION

### Georgia Institute of Technology

*Master of Science in Computer Science - GPA: 4.00/4.00*

January 2022 - December 2023 (Expected)

*Atlanta, GA*

### University of New Orleans

*Bachelor of Science in Computer Science - GPA: 3.99/4.00*

August 2019 - December 2021

*New Orleans, LA*

## SKILLS

Languages	Python, Java, HTML, CSS, JavaScript, SQL
Technologies	Git, Unity, Jupyter Notebook
DevOps	Amazon Web Services (AWS), Terraform, GitHub Actions
Certifications	AWS Solutions Architect - Associate, AWS Cloud Practitioner

## EXPERIENCE

### PayPal

*Software Engineer Intern*

May 2022 - August 2022

*Austin, TX*

- Improved fault-tolerance of synthetic testing systems of 4 classes of self-hosted GitHub Actions runners by creating a failure recovery script using Python and GitHub APIs that detects and recovers workflow scheduling failures.
- Enabled 24/7 reliability of GitHub Actions synthetic tests by deploying the failure recovery script to AWS Lambda using Terraform which triggers every 5 minutes, recovers up to 25 failures a day, and only costs \$0.57 a month.
- Provided better GitHub infrastructure observability by designing and developing a GitHub App that processes workflow webhooks and delivers 3 key metrics about current builds running across Venmo's 1200+ repositories.

### USAA

*Software Engineer Intern*

May 2021 - July 2021

*Plano, TX*

- Reduced cluttering of a qTest archive by 84% and allowed for easier feature-based auditing by designing a new directory structure for publishing automated infrastructure test results that affected 70 projects.
- Enabled automatic AWS resource tagging on one parameter if not provided by a developer or optional manual tagging otherwise by modifying a custom Terraform provider utilized by 55 projects using GoLang.
- Decreased the cost of conducting network connectivity testing on AWS EC2 instances by 92.38% by developing a selection of 5 AWS Systems Manager (SSM) testing automations using Terraform and GitLab CI/CD.

### University of New Orleans

*Undergraduate Research Assistant*

January 2021 - May 2021

*New Orleans, LA*

- Developed immersive eXtended Reality (XR) games using Unity and C# under advisement of Dr. Farjana Eishita to discreetly detect 8 types of cognitive distortions and other mental health conditions.
- Converted 42 scenes of an existing cognitive distortion detection game manually from Augmented Reality (AR) to Mixed and Virtual Reality (MR & VR) for player-experience (PX) comparisons between platforms.
- Conducted moderated PX testing on 9 individuals to identify bugs and ensure effective game-play engagement.

## PROJECTS

### Stocks Simple Moving Average | Python, Amazon Web Services

- Built an AWS pipeline that computes the Simple Moving Average (SMA) of historical OHLC-type stocks.
- Created the cloud infrastructure using the AWS Python SDK (Boto3) to automatically initialize and connect two S3 buckets, two Lambda functions, one SNS topic, and one DynamoDB NoSQL database table.
- Decreased the time it takes to acquire the SMA of an input file by 99.87% compared to manual calculation.

### Warframe Inventory Market Info | Python

- Developed a program that automatically gathers 4 different economic attributes about users' in-game Warframe inventory items, saving users about 52 seconds of work per item page compared to manual calculation.
- Generated a list of users' inventory items using OpenCV to isolate item names from the inventory-screen image by thresholding the text colors, and using PyTesseract to read and save the remaining text.
- Enabled better investment decisions and comparisons by collecting the average currency price of the 10 current cheapest live web market value sell-orders using the warframe.market API for each item in users' inventory.
